COMMISSIONER'S COMMENTS

I feel fortunate to be serving as commissioner during a time when agriculture is becoming a bigger and better industry in our state. The economic information contained in this publication is proof positive that we're moving forward.

There's no question that Ag Project 2000 is paying dividends, for it has united our farm community in efforts to attract new business to the state. Ag Project 2000 began in early 1992, when 150 representatives from virtually every agricultural-related organization in the state agreed to develop a plan to strengthen our farm economy. This project has emerged as one of the most important developments in Kentucky's agricultural history.

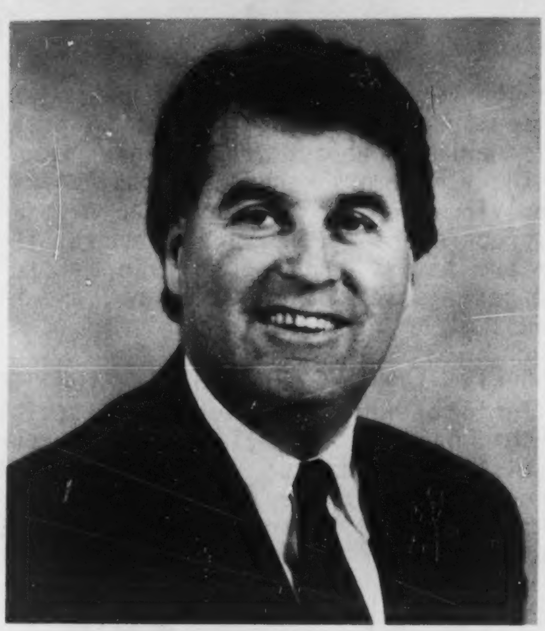
In just over two years, some 21 new agricultural businesses have come to Kentucky, adding about 3,000 jobs to our labor force. Those firms are making nearly $200 million in investments in Kentucky.

Moreover, 73 existing agribusinesses announced expansions, adding another 1,200 jobs and a $110 million investment.

All of these businesses are processing farm commodities, thereby adding value to those products. New processing companies like Siemer Milling in Hopkinsville, Hudson Foods in Henderson County and Cagle's Inc. in Franklin have created a multi-million dollar market for Kentucky wheat and corn. The expansion of Owensboro Grain company brought a valuable new market for soybeans. And the list goes on and on.

The enthusiasm and determination generated by Ag Project 2000 also has given rise to some significant changes in the state's agricultural policy. For example, the 1994 General Assembly passed legislation redefining agriculture's eligibility for economic development programs, making it easier for farmers and agribusinesses to receive state financial assistance. Agribusiness, in fact, is given priority status in some of the state economic development programs. Previously, agriculture did not qualify for most of those programs.

Another new law created a better system for helping farmers address water quality problems. A companion bill provided funds for cost-share assistance.



Reaching the Ag Project 2000 goal of a $5 billion farm economy is an ambitious undertaking that won't happen overnight, but we've made great strides in laying the foundation for success.

As we move toward the turn of the century and our self-imposed time frame, this annual publication of the Kentucky Agricultural Statistics Service will continue to provide a gauge of our progress. With each passing year, we can turn to the economic statistics contained herein to assess where we've been, where we are and where we need to be focusing more effort.

In fact, the importance of this publication, as well as the various regular reports from KASS, cannot be understated. We have no other means with which to determine the economic condition of our agriculture community. Indeed, the hard work of Dave Williamson and his dedicated staff of professionals provides farm interests with timely and accurate information on virtually every facet of farm production--from the value of exports to what farmers pay for baler twine.

For many years, the Kentucky Department of Agriculture has had a cooperative agreement to work with the Kentucky Agricultural Statistics Service on this and other reports. We are pleased to present this information and look forward to a bright future for our agricultural industry.

Sincerely,

ED LOGSDON
Commissioner of Agriculture

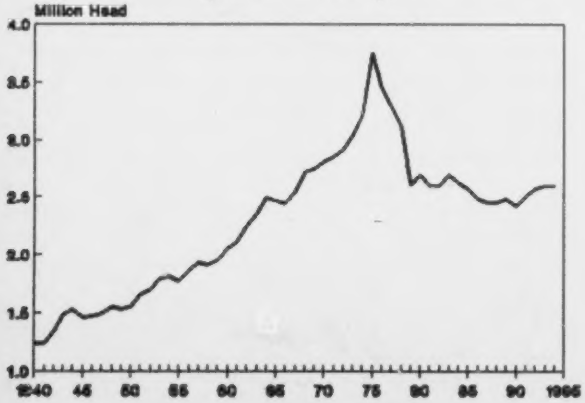
FOREWORD

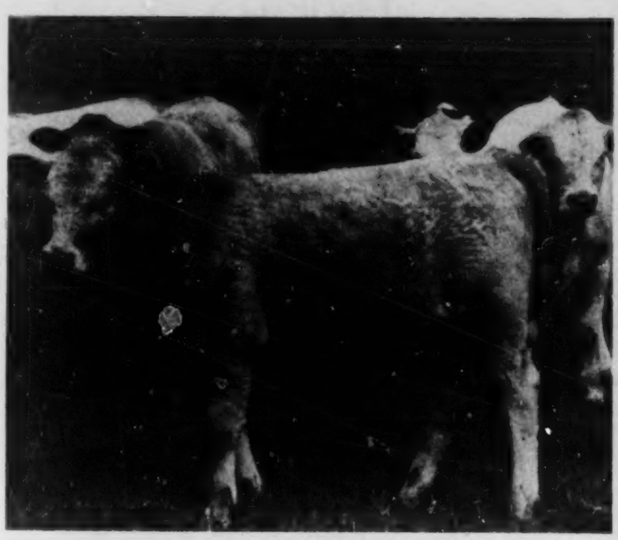
Thanks to the Kentucky Department of Agriculture we are again able to present this annual publication. Thanks also to Kentucky farmers and agri-business for supplying the basic information necessary to prepare the agricultural numbers. These numbers assist the industry in recording the past, assessing the current, and help planning for the future.

This 1993-94 edition is the 17th bulletin of which I have been associated since being the State Agricultural Statistician. One of the marked trends since my first coming to Kentucky in 1970 has been the improved quality of the Kentucky beef herds. Kentucky is the largest beef cattle State east of the Mississippi River and these animals pictured above are an example of the improved Kentucky cattle industry.

Cattle numbers do not usually change sharply from one year to another, but the chart shows these numbers have varied considerably over the last 55 years. Cattle numbers peaked in 1975 and then dropped rather sharply as fence row to fence row farming became common in the western half of Kentucky. Many counties lost half their cattle herd during this period and many of the fences taken out have not been rebuilt. What will the trends be for the future? Interest is mounting in added value of agricultural products. Kentucky calves kept in Kentucky to yearling weights and in some cases fed to slaughter would greatly increase cash receipts from the sales of cattle and calves.

Kentucky Cattle & Calves - January 1
(1940 - 1994)





As Kentuckians work together to reach our goal of annual cash receipts of $5 billion by the year 2000, the cattle industry will be a major player. Other commodities are also expanding, but many feel one of the greatest strides can be made in the natural resources already here in forages and cattle.

Commissioner Logsdon is dedicated to promoting agriculture and supporting the agriculture community in all areas. One of his main goals is for the universities, farm organizations, commodity groups, farmers, State government, etc. to all work together for the betterment of Kentucky agriculture.

In closing, I thank my staff for their conscientious efforts in developing and publishing accurate and timely agricultural statistics. Also, thanks to the enumerators who are on the firing line to collect the basic information from the grass roots.

Sincerely,

Dave Williamson

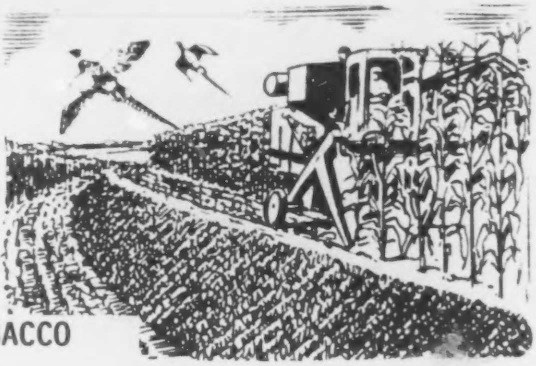
1993 CROP HIGHLIGHTS



The 1993 crop growing season was characterized by a dry, hot summer and flooding along the Mississippi River. Even with these adverse conditions, crop production was generally good. Yields, however, varied greatly depending on rainfall received.

BURLEY TOBACCO

Kentucky farmers produced 426.3 million pounds of burley tobacco, down 14 percent from the large 1992 crop. Both harvested acreage and yield were down. Harvested acreage at 196,000 acres was down 28,000 acres from 1992 and the smallest acreage in three years. Yield per acre at 2,175 pounds was down 50 pounds from a year earlier. Fayette County was the State's number one burley county with 13.1 million pounds of tobacco. There were thirty-five counties with production exceeding 5.0 million pounds.

Preparation and seeding of burley beds was delayed in the spring by cold, wet conditions. Plants produced by float systems continued to increase and the tobacco industry estimates up to 40 percent of the plants set in 1993 were produced by non-traditional methods. Seeding, germination and development of transplants progressed at a slower pace than the year before. Setting of burley started the second week of May with an adequate supply of plants in most areas, though some localized shortages were experienced. On May 30, 40 percent of the burley acreage had been set compared to 63 percent in 1992 and 54 percent for average. Setting continued through the end of June with late activity concentrating on resetting tobacco damaged by storms.

Burley showed good growth in spite of later setting than the previous year and average. Angular leaf spot along with blue mold, black shank, and black root rot were identified early in the growing season. In early July hot weather and lack of soil moisture started to stress the burley crop and some of the crop started blooming earlier than desired. As the hot, dry weather continued, blue mold activity slowed while black shank developed into a major problem. In late July farmers were spraying for suckers and insects, topping early blooming fields and cutting some very early maturing tobacco.

Dry weather continued into August. There was some rain but it was spotty. Farmers became increasingly concerned over lack of soil moisture, black shank in many areas and short tobacco. Damage from black shank varied from moderate to severe and field to field. Burley was in various stages of development but overall plants were shorter than normal. Burley cutting got underway the second week of August with some early cutting being done to salvage tobacco damaged by black shank. Many areas of Kentucky received rain in mid-August and an improvement in size and condition of burley was noted. Curing of housed burley went along smoothly with minimal houseburn. Quality and weight of the housed tobacco was good. As cutting accelerated in September, a shortage of labor was evident. By the last week of September over four-fifths of the burley had been cut and stripping of early cured tobacco had started. Virtually all of the burley had been cut by the second week of October. Tobacco cured well with generally good quality, color, and weight.

Burley markets opened on November 22 with a good quality crop ready for sale. A large amount of the burley for sale went into the pool. The 1993 burley price averaged 182.5 cents per pound, an increase of .4 cents from the 1992 crop. The 1993 burley crop was valued at $778.0 million, down 14 percent from the 1992 crop.

DARK TOBACCOS

Production of all four types of dark tobacco grown in Kentucky was up from the 1992 crops.

Type 22, Eastern Dark Fired, production totaled 8.51 million pounds, up 9 percent and the largest crop in seven years.

Type 23, Western Dark Fired, production totaled 10.5 million pounds, up 15 percent and the largest crop in nine years.

Type 35, One Sucker Dark Air production totaled 6.40 million pounds, up 12 percent and the largest crop in 8 years.

Type 36, Green River Dark Air, production totaled 3.36 million pounds, up 2 percent and the largest crop in 7 years.

Tobacco companies continued to buy Types 22, 23, and 35 directly from the farmers.

CORN

Corn for grain production by Kentucky farmers totaled 126.9 million bushels, down 26 percent from the previous year's record high production. The smaller crop resulted from both a lower yield and decrease in harvested acreage. Yield per acre at 104 bushels was down 28 bushels from the record high 1992 yield of 132 bushels. Harvested acreage at 1.22 million acres was down 6 percent from a year earlier. The State's top corn producing county continues to be Union with 9.73 million bushels. The 1993 corn for grain crop was valued at $329.9 million, a decrease of 14 percent from 1992. Price per bushel at $2.60 was the highest in five years.

Showers and wet soil conditions delayed the start and then slowed corn planting in Kentucky. By May 2, 28 percent of the State's corn acreage had been planted, behind the 59 percent of 1992 and 42 percent for average. As soils dried and soil temperatures warmed, planting activity quickened. Planting, however, continued to be slow in Western Kentucky due to wet soils. By May 30, 92 percent of the corn acreage had been planted, slightly behind last year. Average height of the crop was 6 inches. Virtually all of the State's corn had been planted by the second week of June.

During June corn fields in individual localities were damaged by hail and heavy rainstorms. Weed control in some areas was difficult due to wet soils. The last week of June corn started to tassel, a little behind 1992 and average. Corn continued to show excellent growth into July but hot temperatures started to stress the crop. Cooler temperatures and rain were needed to improve pollination. Scattered rainfall was received in July and some corn showed improvement. Condition of the corn crop varied greatly within each county based on rainfall received but overall corn continued to be stressed due to high temperatures. Heat related problems with pollination were reported.

On August 1 the corn crop was in fair to mostly good condition even with the hot, dry conditions. The crop was 92 percent silked and 27 percent in the dough stage. For much of the State's corn, it was at a critical stage of development and it needed rain. Generally early planted corn was better than later planted corn. The July heat was especially hard on corn that was silking and tasseling under high temperatures with minimum rainfall. This resulted in decreased yield. Spotty rains in mid-August helped late corn improve but conditions continued generally hot and dry.

Harvesting of early corn started in the first week of September. The hot, dry conditions helped to dry the grain down for harvest. By September 5, 33 percent of the corn crop was mature or harvested, ahead of the 26 percent of 1992 and 32 percent average. Harvesting advanced faster than average as the grain dried at a fast rate. Very little if any artificial drying was needed. By early October, over 50 percent of the corn was harvested. No corn was hurt by freezing temperatures. Yields varied greatly county by county and even within a county depending on rainfall received. Generally earlier planted corn yielded better than later planted corn.

SOYBEANS

Soybean production totaled 38.0 million bushels, down 14 percent from the 1992 crop. The smaller production resulted from both a lower yield and smaller harvested acreage. Yield per acre at 33.0 bushels was down 5 bushels from the 1992 record high yield of 38.0 bushels. Harvested acreage at 1.15 million acres was down 10,000 acres from 1992. Counties along the Mississippi River flooded reducing planted soybean acreage in these counties. The top soybean production county in Kentucky continued to be Daviess with 2.72 million bushels. The 1993 soybean crop was valued at $250.5 million, virtually the same as 1992. Value per bushel at $6.60 was the highest in 5 years.

Planting of single crop soybeans started in early May but didn't get in full swing until mid-May when corn planting started to slow. By mid-June farmers were virtually finished planting single crop soybeans. They started to plant double crop soybeans following the start of the barley harvest in mid-June and subsequent harvest of winter wheat. Double crop planting of beans following wheat was delayed a week to 10 days due to a late maturing wheat crop. Some early planted soybeans started to bloom as double crop beans were being planted. Planting of double crop soybeans was completed by mid-July.

Conditions in early August were hot and dry with only scattered rainfall received. Soybeans were in fair to mostly good condition but some double crop beans were short and very much in need of moisture. By mid-August 75 percent of the State's soybeans were blooming or beyond compared to 79 percent in 1993 and 78 percent for average. Double crop and late season soybeans had smaller and fewer pods than earlier planted single season beans.

Harvesting of single crop soybeans started in late September while late beans benefited from rain. On October 3, 50 percent of the beans were shedding leaves or beyond, 4 percent had been harvested and 20 percent of the crop was still entirely green. Very few if any soybeans were damaged by killing frosts in late October. Yields were generally average but variable depending on moisture received. Full season soybeans out yielded double crop beans except in a few areas. No serious problems were encountered during harvest.

OTHER CROPS

Kentucky farmers harvested 23.0 million bushels of winter wheat, down slightly from the large 1992 crop. Acres harvested for grain at 470,000 acres was up 50,000 acres while yield per acre at 49 bushels was down 6 bushels from the 1992 record yield of 55 bushels. Logan continued as Kentucky's leading wheat county with a production of 3.00 million bushels and yield of 60 bushels per acre.

Winter wheat came through the winter in good condition, but development in May was slowed by cool, wet weather. Some head scab, powdery mildew, barley yellow dwarf and rust were present but they didn't develop into problems that hurt yield. Wheat harvest started in mid-June but some fields were harvested 7 to 10 days later than usual due to slow growth in the Spring. Lodging, hail, disease and insects caused some problems but yields were fair to good.

Alfalfa hay production totaled 1.04 million tons, down 1 percent from the 1992 crop. Yield per acre at 3.70 tons per acre tied 1989 as the record high.

All other hay production totaled a record high 4.42 million tons, an increase of 14 percent from the 3.89 million tons in 1992. Yield per acre at 2.30 tons was also a record high. The leading alfalfa hay production county was Shelby and the leading all other hay county was Barren.

Alfalfa and red clover suffered some winter damage. Due to a cool spring, many producers were still feeding hay in early April with localized shortages experienced. Cool temperatures in April slowed regrowth but abundant moisture and warmer temperatures stimulated hay growth in early May. Alfalfa weevils were present but not a major problem in 1993. A good quality and yielding crop of alfalfa hay was harvested. The late fall hay crop was fair as yields were reduced by hot, dry weather. Forage supplies available for winter feeding was short to adequate based on locality.

Grain sorghum production totaled 750,000 bushels, the smallest crop in four years. Barley production at 1.07 million bushels was down 10 percent from 1992.

1/No significant commercial production due to freeze. NOTE: In some cases the acreage or yield or production is identical for more than one year. In such cases, the year is the latest year of occurrence.

CROP AND WEATHER SUMMARY - 1993

January temperatures in Kentucky were about 6 degrees above normal and many areas reported record highs. Paintsville recorded the month's highest reading of 73 degrees on the 5th. Precipitation was variable with the western part of the State and Bluegrass area averaging a little above normal while the Central and Eastern Regions were below. Due to the warmer than normal temperatures snowfall averaged less than 1 inch.

The temperature trend reversed itself during February. Average readings for the month were 1-2 degrees below normal. The thermometer dropped below zero across much of the State between the 18th and 20th and fell to -5 degrees at Rough River Dam on the 19th. Precipitation in all but the West was above normal and led to snowfall amounts between 10 and 15 inches in central and eastern portions of the State.

March continued the trend of colder than normal temperatures, averaging 2.9 degrees below normal in the West to 4.9 degrees below normal in the East. The year's coldest reading at -11 degrees was recorded at West Liberty on the 15th. Heavy snow in the eastern one-third of the State at that time halted all farm activity. More seasonable temperatures returned by month's end, stimulating growth of early season grasses and winter small grains. Many locations in the West had daytime highs jump into the lower 80's on the 30th and 31st. Precipitation for the month averaged about an inch below normal in all but the eastern portion of the State, though near continuous light showers and below normal temperatures kept fields from drying and delayed the start of the planting season.

Temperatures remained on the cool side during most of April, averaging 2.4 degrees below normal at 53.6 degrees. These colder than normal readings for the third consecutive month continued to hinder fields from drying. By mid-month many farmers found themselves 10 days to two weeks behind in land preparation and Spring planting. An unseasonable cold spell passed through the region on the 22nd with frost reported in some locations though no serious damage occurred. Nolin River Lake reported the month's lowest temperature at that time of 19 degrees. By month's end sunny skies and daytime highs in the upper 70's and lower 80's were prevalent across the State.

Average temperature for May at 64.8 degrees was slightly warmer than normal. Daytime highs averaged in the upper 70's with nightly lows averaging in the mid 50's in the West to the upper 40's in the East. Warm air passing through the region on the 8th pushed the thermometer above 90 degrees at several locations for the first time in 1993. Precipitation for the month averaged 3.2 inches, 1.6 inches below normal. Many western locations received between 2 and 3 inches of rain the first week of May causing flooding of bottom land. Days suitable for field work averaged 4.2 per week and increased to 5.5 days during the final week of the month. Farmers remained about a week behind in Spring planting.

The first week of June saw temperature readings dip into the 30's across most of the State. The lowest reading of 34 degrees was recorded at Nolin River Lake on the 1st and at West Liberty the following day. By the 4th, however, turbulent weather swept through the region. High winds and hail damaged or destroyed thousands of trees. Tobacco barns and other buildings suffered damage all across the Commonwealth. Heavy rainfall during the following week caused localized flooding and some replanting of areas was necessary. Single day rainfall amounts exceeding 4 inches occurred at Frenchburg, Slade and Wheelersburg on the 5th and at Henderson on the 9th. For the month rainfall averaged 5.1 inches or 1.2 inches above normal. Shelbyville received the most at 10.25 inches. Temperature for the month averaged 72.3 degrees, slightly below normal.

Extreme heat and high humidity settled over the State during July. Average temperature for the month at 80 degrees was about 4 degrees above normal. Many Western areas had daytime highs average in the mid 90's with seven locations reporting 100+ degree readings by months end. The year's highest temperature of 102 degrees occurred on the 27th at Lovelaceville and again the next day at Gilbertsville and Barren River Lake. Corn, soybeans, and tobacco began to show signs of heat stress in all but isolated areas that got relief from widely scattered showers. Precipitation for July averaged more than an inch and a half below normal. Approximately 40,000 acres of bottom land along the Mississippi River in Western Kentucky were flooded from rains upstream.

August temperatures remained above normal for the second month in a row averaging 76.6 degrees. The extreme heat was more prevalent in the West, with six stations reporting 100 degree readings by months end. Gilbertsville on the 27th recorded the highest temperature with 101 degrees. Precipitation for the month was near normal at 3.8 inches due mainly to widely scattered thunderstorms and general rains between the 2nd to 6th and again on the 11th through 14th. Precipitation was spotty with only localized showers during the remainder of the month and by the end of August two-thirds of the State had soil moisture rated as short to very short. Crops continued to show stress from the extreme heat. Cattle farmers in the drier locations were feeding hay due to poor pasture conditions.

The intense heat and dry conditions of the preceding two months began to subside during September as Kentuckians began to feel the gradual shift from summer to fall. Temperature for the month averaged a degree and a half below normal at 67.2 degrees. Precipitation was above normal in the West and East though slightly below normal in the Central and Bluegrass Regions. General rainfall of between 1 and 2 inches covered the State from the 1st to the 4th and again at mid-month. On the 23rd general showers began to pass through the region, causing daytime highs to drop into the 60's to 70's and giving much needed relief from a long and hot summer. By month's end soil moisture was rated 60 percent adequate and two percent surplus. Nighttime lows dropped into the 20's on the last day of the month at Manchester (27 degrees), Shelbyville (28 degrees) and West Liberty (29 degrees) though no major crop damage was reported.

Average temperature during October at 55.1 degrees was 2 degrees below normal. A warm spell late in the first week elevated daytime temperatures into the 80's with the month's highest reading (88 degrees) posted at Barren River Lake on the 7th. Widespread showers provided a good soaking from the 16th to the 21st. Most locations received from 2 to 4 inches. For the month average rainfall of 4.25 inches was an inch and a quarter above normal. The season's first killing frost occurred late in the month though no major damage was reported to crops. The lowest temperature for the month (23 degrees) was recorded at Somerset and Manchester on the 28th and at Paducah on the 31st. Snow showers occurred in North and West Kentucky on the 30th with the most significant accumulation along the Ohio River. Covington reported 5.9 inches.

Temperatures remained below normal for the third consecutive month during November with the 30-day average of 45 degrees about 2 degrees under normal. Bitter cold air and snow flurries passed through Kentucky late in the first week forcing temperatures into teens. The coldest spots at 12 degrees were Manchester and West Liberty. A brief warm spell at mid-month pushed daytime readings Statewide into the 70's and even lower 80's at some locations in the East. Paintsville had the highest temperature for the month at 84 degrees on the 15th. Precipitation was above normal in the Western and Bluegrass Regions but slightly below normal in the Eastern and Central parts of the State.

Temperatures across the State during December varied from 1 degree above normal in the West to 1.2 degrees below normal in the East. The warmest reading of the month (68 degrees) was at Paintsville on the 3rd. Shelbyville had the coldest temperature of the month on New Year's Eve at -6 degrees. Snowfall occurred mostly during the latter part of December and was heaviest in the eastern half of Kentucky. The greatest ground accumulation (7 inches) occurred at Williamstown on the 28th and 29th. Overall precipitation was slightly below normal.

1/Includes stocks at mills, elevators, warehouses, terminals, and processors. 2/Includes on farm and off farm stocks. 3/Marketing year runs from September 1 to August 31. 4/Marketing year runs from June 1 to May 31. 5/Revised. *-No estimate published (Kentucky included in unallocated U.S. total for on-farm wheat). (P-Dec 1) Previous year.

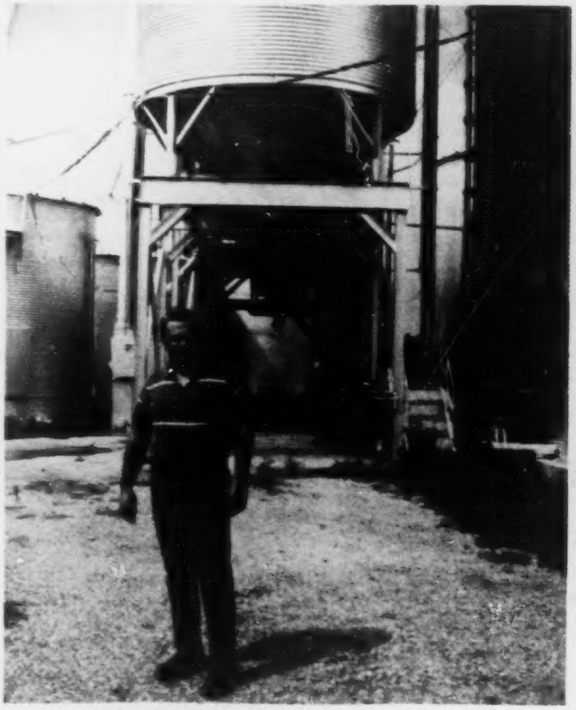
OFF-FARM AND ON-FARM GRAIN STORAGE CAPACITY

Capacity of off-farm commercial grain storage totaled 8.49 billion bushels in the United States on December 1, 1993, down 2 percent from December 1, 1992. Twenty-three States and New England showed decreases from last year, 16 States recorded increases in capacity and one was unchanged. The States showing the largest decreases were Nebraska, 42.9 million bushels; Texas, 41.9 million bushels; Kansas, 25.5 million bushels; Indiana, 16.8 million bushels; and California, 11.1 million bushels. Iowa recorded the largest increase with 10.3 million bushels.

Illinois continued to lead all States in off-farm storage capacity, followed by Iowa, Texas, Kansas, and Nebraska. The top five states accounted for 53 percent of the Nation's off-farm storage capacity on December 1, 1993. Kentucky ranks 27th among States reporting capacity, with 55.7 million bushels.

Off-farm grain storage facilities in the U.S. totaled 11,818 on December 1, 1993, 610 fewer than December 1, 1992. States with the largest number of facilities are Illinois - 1,165; Kansas - 912; Texas - 829; Iowa - 720; Minnesota - 716; and Nebraska - 602. Kentucky ranks 19th with 243 facilities.

The United States on-farm grain storage capacity totaled 11.6 billion bushels on December 1, 1993, down 4 percent from December 1, 1992. Kentucky on-farm grain storage capacity totaled 180 million bushels on December 1, 1993, down 20 million bushels from December 1, 1992.



OFF-FARM & ON-FARM GRAIN STORAGE CAPACITY

UNITED STATES	12,428	11,818	8,664,970	8,491,460	12,090,000	11,625,000

Off-farm capacity data includes all elevators, warehouses, terminals, merchant mills, other storage and oilseed crushers which store grain, soybeans, sunflower seeds, or flaxseed.

APPLES AND PEACHES

Utilized production of commercial apples produced by Kentucky farmers totaled 18.0 million pounds in 1993, up 3.0 million pounds from 1992. Most apple growers had a good and full crop. Price per pound averaged 19.4 cents, down 2.8 cents from the 1992 crop. The total value of all utilized production of 1993 was $3.50 million compared to $3.33 million in 1992. U.S. utilized apple production totaled 10.6 billion pounds, up from 10.5 billion pounds in 1992. Average price per pound at 12.8 cents was down .9 cent from the previous year.

Utilized peach production in Kentucky totaled 5.60 million pounds for 1993, up 1.90 million pounds from 1992. The crop was good even with hail damage, disease problems and severe Japanese Beetle damage. Prices averaged 30.0 cents per pound, up 1 cent from 1992. The total value of all utilized production for 1993 was $1.68 million. U.S. utilized peach production totaled 2.49 billion pounds, up from 2.48 billion pounds in 1992. Average price per pound at 16.0 cents was down .7 cent from the previous year.

KENTUCKY FLOWERS AND FOLIAGE PLANTS - 1993

The 1993 equivalent wholesale value of all sales by flower and foliage growers in Kentucky totaled $21.7 million, up $212,000 from 1992. Kentucky ranked 29th of 36 states that conducted a floriculture survey. This is the second year that Kentucky has conducted a survey.

Data for potted flowering plants, bedding/garden plants, foliage for indoor and patio use, and cut flowers represent growers with $100,000 or more in sales. These operations produced $16.8 million of flower and foliage sales in 1993. The Kentucky wholesale value of total potted flowering plants was $4.84 million. The wholesale value of bedding/garden plants was $10.2 million, foliage for indoor or patio use was $602,000 and the value of cut flowers was $1.16 million.

The number of Kentucky floriculture growers with sales of $10,000 or more numbered 172, down 3 from the 1992 number. Total greenhouse cover was 4.07 million square feet, down 2 percent form 1992. Film plastic (single/double) greenhouses made up 66 percent of the total while glass greenhouses made up 19 percent. Shade and temporary cover totaled 99,000 square feet while open ground was 44 acres.

LIVESTOCK HIGHLIGHTS

CATTLE AND CALVES

The **All Cattle & Calf** inventory for Kentucky totaled 2.6 million head on January 1, 1994, unchanged from the previous year. The all cows that have calved number, at 1.32 million, was the largest cow inventory in a decade. Beef cow numbers climbed for the fourth consecutive year, and totaled 1.15 million on January 1, 1994. This is the highest inventory since 1978. Milk cow numbers slid to a record low 175,000 head, the smallest number of milk cows reported since records began in 1867.

Compared with January 1993: Other heifers over 500 pounds rose 5 percent, beef cow inventory climbed 3 percent, and bulls over 500 pounds rose 1 percent. Both beef and milk replacement heifers over 500 pounds were unchanged. Steers over 500 pounds, and calves under 500 pounds were down 3 percent, while milk cow inventory fell 5 percent. The 1993 calf crop totaled 1.22 million head, 2 percent above 1992, and the largest since 1980.

The value of the January 1, 1994 inventory, at $1.5 billion, was 3 percent above last year and 2 percent below the record high $1.53 billion set in 1991. Average value per head was $575, compared with $560 a year ago and the record high $610 set in 1991. Cash receipts from marketings totaled $763.5 million, 10 percent above a year ago. Marketings increased 3 percent and average price was 7 percent above the 1992 level. Cattle averaged $71.10 per hundredweight during 1993, 7 percent above a year earlier, while calves averaged $87.80 per hundredweight, 6 percent above 1992.

HOGS AND PIGS

The December 1, 1993 **Hog & Pig** inventory, at 850,000 head, was 2 percent below the previous year, and the smallest December inventory since 1985. Hogs for breeding totaled 120,000 on December 1, 1993, unchanged from the previous year. December 1993 market hogs totaled 730,000 head, 3 percent below the previous year, and the smallest end of year market inventory since 1985.

The 1993 pig crop totaled 1.45 million, 6 percent below 1992. Pigs saved per litter averaged 7.73, down 1 percent from the record high 7.83 set a year ago. Producers farrowed 93,000 sows during December 1992 - May 1993, 6 percent below the previous year. June - November 1993 farrowings totaled 94,000 sows, 3 percent below the same period in 1992.

Kentucky's hog and pig inventory was valued at $56.1 million on December 1, 1993, 5 percent below the previous year. Cash receipts from marketings came to $147.8 million, up 1 percent from 1992. Marketings decreased 9 percent from the previous year, but the average price, at $44.40 per hundredweight, was 9 percent above 1992.

SHEEP AND WOOL

There were 27,000 **Sheep and Lambs** on Kentucky farms as of January 1, 1994, unchanged from the revised 1993 level. Ewes one year and older on January 1, 1994, at 18,500 head, was also unchanged from last year. The 1993 lamb crop, at 23,000 head, was 5 percent above the 1992 level. Cash receipts from marketings, at $925,000, climbed 3 percent from the previous year. Marketings fell 12 percent from 1992, but increased marketings of higher priced lambs more than offset lower total marketings. Both sheep and lamb prices were 5 percent above the 1992 levels. Lamb price averaged $58 per hundredweight during 1993, while sheep averaged $22.00 per hundredweight.

Wool production for 1993, at 155,000 lbs., fell 11 percent from the 1992 output. Sheep shorn during 1993 totaled 23,000 head, 4 percent below the previous year. Average weight per fleece was 6.7 pounds compared with 7.3 pounds last year. Wool price averaged 34 cents per pound in 1993 compared with 40 cents in 1992. The 1993 value of wool totaled $53,000, compared with $70,000 in 1992 and $56,000 in 1991.

POULTRY

The December 1, 1993 inventory of **All Chickens** (excluding broilers) totaled 3.48 million birds, 9 percent above the previous year. Hens and pullets of laying age, at 2.5 million, climbed 2 percent from 1992. Laying flocks produced 629 million eggs during 1993, 7 percent above the 588 million produced the previous year. Value of sales from eggs came to $35.6 million for 1993, 18 percent above last year. Eggs averaged 68.0 cents per dozen in 1993 compared with 61.7 cents during 1992.

Broiler production for 1993 was 174 million pounds, valued at $52.2 million, compared with production of 173.2 million pounds, valued at $48.5 million during 1992.

BEES AND HONEY

Honey production in the United States during 1993 from producers with five or more hives totaled 230 million pounds, up four percent from 1992. There were 2.88 million colonies producing honey, down five percent from 1992. Yield per colony averaged 80.1 pounds, up 7.3 pounds from the 1992 average of 72.8. Colonies that produced in more than one state were counted in each state, and yields may be understated at the state level. Producer honey stocks were 49.1 million pounds on December 15, 1993, up 26 percent from the previous year.

Prices for the 1993 honey crop averaged 54.4 cents per pound, one percent below the 1992 average of 55.0 cents per pound. Honey prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting state average prices by the state quantities sold. Lower prices for water white and extra light amber honey during 1993 caused the decline in the all honey average price. Government payments are excluded from the honey prices.

Kentucky's honey production during 1993 totaled 240,000 pounds, up from 120,000 pounds in 1992. Yield per colony averaged a record high 60 pounds, compared with 30 pounds in 1992. A late spring caused many plants to bloom at the same time. Honey production was heavy in this period, pushing production to record levels for many producers. Problems with mites and a long cold winter kept the number of colonies at 4,000 hives, unchanged from 1992.

Honey stocks held by producers on December 15, 1993 totaled 89,000 pounds, 65 percent above the previous year. Value of production for 1993 was $202,000, compared with $89,000 in 1992. The 1993 average price was 84 cents per pound, 10 cents above the 1992 level.

DAIRY HIGHLIGHTS

MILK COWS AND MILK PRODUCTION

During 1993 the average number of milk cows on Kentucky farms was 179,000 head, down 5,000 head from the 1992 average. Total milk production in the State was 2.12 billion pounds, down from the 1992 total of 2.15 billion pounds. In 1993 the average milk per cow was 11,844 pounds, an increase of 159 pounds per cow over the previous year. The number of farms with milk cows, at 4,600, was down 200 from the previous year.

Grain and concentrates fed to Kentucky milk cows during 1993 totaled 552,000 tons, just slightly above the amount fed in 1992. Each cow received an average of 6,160 pounds of grain and concentrates during the year, or 52 pounds per hundredweight of milk produced. The average value of grain and concentrates fed to dairy cows increased to $8.42 per hundredweight in 1993, from $8.38 the previous year. The average value of concentrates per hundredweight of milk produced was $4.37 for 1993, compared with $4.26 during 1992.

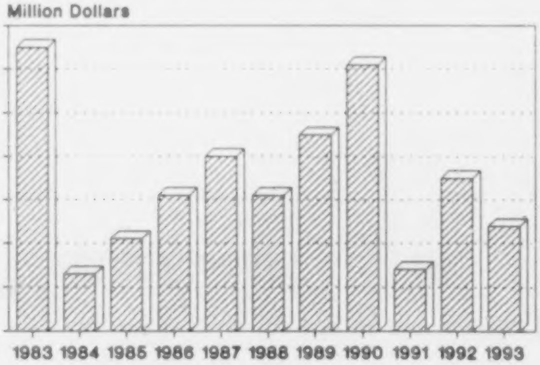
MILK DISPOSITION AND INCOME

Kentucky dairy producers sold 2.05 billion pounds of milk to plants and dealers in 1993, and used 75 million pounds on the farm as milk, cream and butter, or feed for calves and other livestock. Milk sold to plants decreased by 30 million pounds from 1992, and milk used on the farm remained the same as in 1992.

Fluid grade milk sold to plants and dealers totaled 1.94 billion pounds, 95 percent of total milk sold. Manufacturing grade milk sold to plants and dealers totaled 110 million pounds.

The value of milk produced during 1993 amounted to $284 million, a decrease of 4 percent from 1992. This includes the value of milk used on farms. The average price of all grades of milk sold was $13.40 per hundredweight, down from $13.70 in 1992. Cash receipts from marketings came to $274 million, down 4 percent from the previous year.

KENTUCKY CASH RECEIPTS
FROM MILK MARKETED



MANUFACTURED DAIRY PRODUCTS

Kentucky plants produced 18.3 million pounds of cottage cheese curd in 1993, down slightly from 1992. Creamed cottage cheese production totaled 17.6 million pounds, down 10 percent from the previous year. Lowfat cottage cheese production totaled 8.6 million pounds, up 17 percent from 1992. During 1993, twenty-two Kentucky plants produced one or more dairy products. Totals for most dairy products manufactured in Kentucky are not published to avoid disclosing individual plant production.

1993 FARM INCOME HIGHLIGHTS

CASH RECEIPTS

Farm products produced by Kentucky farmers during 1993 generated cash receipts totaling $3.38 billion, 5 percent above the 1992 level. Livestock and livestock products sales accounted for $1.72 billion, or 51 percent of total cash receipts. Crop sales produced $1.66 billion or 49 percent of total receipts.

Livestock cash receipts rose 5 percent from 1992. Receipts were above 1992 for all livestock items except dairy products, wool, and catfish. Cattle and calf sales led all livestock items with $763.5 million in cash receipts, 10 percent above the previous year. Horse sales and stud fees ranked second with $441 million, up 2 percent from 1992. Receipts from dairy products ranked third, at $274 million, 4 percent below the previous year. Cash receipts from hogs and broilers rounded out the top five livestock leaders, with hog sales at $147.8 million, up 1 percent, and receipts from broiler sales climbing 8 percent to $52.2 million.

Crop cash receipts rose 6 percent from 1992. The only crops showing declines from the previous year were wheat, barley, and sorghum grain. Tobacco remains the number one cash crop for Kentucky with $918.9 million in sales, 27 percent of farm cash income. Cash income from corn totaled $246.1 million, 7 percent above the previous year. Soybeans, at $244.2 million in cash receipts, climbed 12 percent from 1992 and ranked third. Wheat and hay were fourth and fifth respectively, with wheat sales, at $64.6 million, down 2 percent, and hay sales at $56.0 million, up 10 percent from 1992.

PRICES RECEIVED BY KENTUCKY FARMERS

Prices received by agricultural producers in Kentucky were mostly above 1992 levels. Marketing year average prices for grains were up in 1993 except for wheat and barley. The corn preliminary price of $2.60 per bushel was up 37 cents from the previous year, while soybeans were up 92 cents at $6.60 per bushel. The market year for corn and soybeans runs from September through August. Wheat averaged $2.85 per bushel, down 41 cents from 1992. The marketing year for wheat runs from July through June. The burley tobacco 1993 market season price of $1.825 per pound was up 0.4 cents from 1992 and the highest price since 1984. Dark fire tobacco prices were up from 1992, while dark air tobacco prices were mixed. The 1993 marketing year average price for all hay was the same as the previous year at $82 per ton. By individual types, alfalfa hay at $113 per ton was up $6 from 1992, while all other hay at $70 per ton was up $2 from the previous year.

Annual average prices for cattle and hogs in 1993 were above 1992 levels. Steers and heifers weighing over 500 pounds were $79.00 per hundred pounds, $4.40 above the 1992 average price. Beef cows at $46.20 were up slightly from $46.00 in 1992. Calves under 500 pounds at $87.80 were up $4.90 per hundred pounds compared to 1992. Barrows and gilts at $44.80 per hundred pounds were up 60 cents from the previous year, while sows at $35.70 were up $4.50 from 1992. Milk cow price per head at $1010 was up $30 per head from the 1992 price of $980 per head. The all milk price at $13.40 per hundred pounds was down 30 cents from 1992. Fluid grade milk at $13.50 was down 30 cents from the previous year. Manufacturing grade milk was down a dime at $10.90 per hundred pounds. Egg prices averaged 68 cents per dozen, up 6.3 cents from 1992.

PRICES PAID BY U. S. FARMERS

Prices paid for materials used in farm production activities are not published at the state level. Prices paid during 1993 by U.S. farmers for production items were generally above 1992 levels. Feeder livestock showed the largest increase at 8 percent. The only item that showed a decrease in prices paid was fertilizer which was down 2 percent.

Production items that increased from 1 to 6 percent were the following: feed (1 percent), seed (4 percent), agricultural chemicals (4 percent), fuels and energy (1 percent), autos and trucks (5 percent), tractors and self-propelled machinery (4 percent), other machinery and implements (4 percent) and building and fencing materials (6 percent). Farm and motor supplies were unchanged.

KENTUCKY CROP VALUES - 1993

Crops produced by Kentucky farmers in 1993 were valued at $1.94 billion, down 7 percent from a year earlier. The value for hay and soybeans was up from the previous year while tobacco, corn and wheat was down. Of the top five Kentucky grown crops in value of production (tobacco, hay, corn, soybeans and wheat), tobacco, corn, and soybeans increased in price per unit. Wheat decreased in price per unit while hay was unchanged.

The big five crops - tobacco, hay, corn, soybeans and wheat - accounted for over 99 percent of the total value of crops produced by Kentucky farmers in 1993. Tobacco continues to be the number one crop produced in Kentucky with a value of $836.3 million. It made up 43 percent of Kentucky's total crop value. Tobacco value decreased 13 percent from 1992 due primarily to a similar decline in poundage produced. Hay replaced corn as the second most valuable crop ($447.1 million) produced in the State. It made up 23 percent of the State's crop value. Production was up from 1992 while price per unit was steady. Corn was third in value of production with a value of $329.9 million. It made up 17 percent of the total. Soybeans and wheat continued to be ranked fourth and fifth. The value of apples and peaches were both up from 1992.

Nationally, the leading crops by value of production were corn, hay, soybeans, wheat, cotton and tobacco. Hay and cotton increased in value while corn, soybeans, wheat and tobacco decreased. As a combined group, the value of production for these six commodities decreased 5 percent from 1992. Kentucky tobacco production accounted for 30 percent of the Nation's tobacco value.

-- Indicates less than .05%. Percent may not be accurate to .1 in last place because of method of machine computation. NA - Not Available. 1/Revised. 2/Preliminary. 3/Includes stud fees. 4/Includes other poultry, and all other livestock. 5/Forest products not included in farm cash receipts, but are included in net farm income. 6/Includes sunflowers, rapeseed, canola, other seeds, other field crops and mushrooms.

CASH RECEIPTS BY COUNTY - 1993

Kentucky counties generating over $100 million in cash receipts during 1993 included Fayette, Woodford, Bourbon and Graves. Sales of horses, cattle and tobacco generated more than 90 percent of total receipts in the top three counties. Broilers were the major source of cash receipts for Graves county. Fourteen Kentucky counties produced more than $50 million in cash receipts during 1993.

Cattle and calf receipts accounted for 44 percent of total livestock cash receipts during 1993. Receipts from horse sales came in second with 26 percent of the total. Dairy products ranked third with 16 percent of total livestock cash receipts.

Tobacco remains the leading cash crop in Kentucky for 1993 with 55 percent of total crop receipts. Corn was second with 14.9 percent of the total. Soybeans came in third with 14.7 percent of total crop receipts. For individual commodities, the cash receipts leaders were:

Tobacco - Fayette
Corn - Union
Soybeans - Daviess
Wheat - Logan
All Hay - Pulaski

Horses - Fayette
Cattle - Barren
Dairy - Barren
Hogs - Union
Broilers - Graves

TOTAL CASH RECEIPTS - 1993

1993

TOP FIVE COUNTIES (DOLLARS)
1. FAYETTE - 209,864,000
2. WOODFORD - 118,566,000
3. BOURBON - 101,610,000
4. GRAVES - 101,212,000
5. OLDHAM - 87,091,000

COSTS OF PRODUCING AND SELLING BURLEY TOBACCO: 1991, 1992, AND PRELIMINARY 1993

The Economic Research Service of the USDA has estimated variable costs of producing and selling burley tobacco increased from $2,270 per acre in 1992 to $2,327 in 1993. Total costs per acre, excluding land and quota costs, are estimated at $3,197. Most 1993 variable costs increased due to higher input prices. The variable costs of producing burley tobacco per 100 pounds were $108 in 1993, up from $105 in 1991 and 1992. The total cost per 100 pounds, excluding a charge for land and quota, averaged $145 in 1991 and 1992, and is expected to be $149 in 1993.

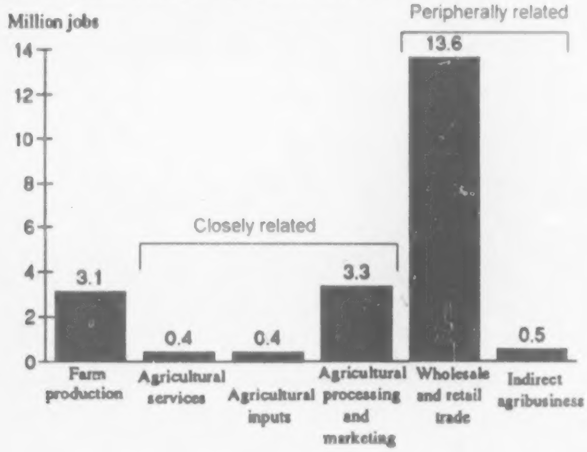
1/Includes operator, family, exchange, and hired labor valued at prevailing hired wage rates. 2/Includes rental values of housing, personal property, utilities, drinks, snacks, and field toilets. 3/Includes custom costs if they could not be separated from the fertilizer and lime costs. 4/Includes plant bed seed, fertilizer, pesticides, fumigants, and purchased plants. 5/Includes custom costs if they could not be separated from the chemical costs. 6/Includes tractor, machinery, and irrigation fuel and lubrication. 7/Includes cost of LP gas, fuel oil, or diesel fuels. 8/Includes machinery, equipment, irrigation, and barn repairs. 9/Marketing assessment began with the 1991 crop. 10/Includes operating interest charged on all variable cost items except operator and family labor, marketing fee, no-net-cost assessment, and inspection and grading fee. 11/Includes items such as sticks, twine, cover crop seed, and baling supplies. 12/Weighted average of cash and share rented quota.

U.S. FARM AND FARM-RELATED EMPLOYMENT IN 1990 A SIGNIFICANT SOURCE OF JOBS IN MANY AREAS

Farming and its related industries provided 21.3 million jobs in 1990, the most recent year for which data are available. More than a third of farm and farm-related employment comes from farming and its closely related industries, which provide agricultural services and inputs and process and market agricultural goods. Farm production employment, which includes farm proprietors and hired farm workers, provided 3.1 million jobs. Agricultural services, forestry, and fishing employed 388,000 workers. Agricultural input industries, including farm machinery and equipment manufacturing, provided nearly 413,000 jobs.

Farm and farm-related employment, 1990

Wholesale and retail trade, although only peripherally related to farming, accounted for most farm and farm-related employment.



Agricultural processing and marketing industries, which prepare agricultural products after they leave the farm, contributed almost 3.3 million jobs. Industries peripherally related to farming - wholesale and retail trade of agricultural products (13.6 million jobs) and indirect agribusiness such as chemical and fertilizer mining and food products machinery manufacturing (0.5 million jobs) - accounted for the largest share of farm and farm-related employment.

Farm and farm-related industries employed 264,000 more workers in 1990 than in 1989, up 1.3 percent, with most of the new jobs (381,000) in agricultural wholesale and retail trade. Although the number of jobs rose, farm and farm-related employment's share of total U.S. employment declined from 15.8 percent in 1989 to 15.7 percent in 1990.

Over 6.4 million farm and farm-related jobs were in nonmetro areas in 1990. While farm and farm-related industries provided many nonmetro jobs, nearly 70 percent of all farm and farm-related employment was concentrated in metro areas. However, such jobs accounted for less than 14 percent of total metro employment.

Farm and farm-related industries accounted for 15.7 percent of total U.S. employment, but in 30 States these industries' share of jobs exceeded the national average. Among farm and farm-related industries, wholesale and retail trade of agricultural products accounted for the largest share of total employment in all States except North and South Dakota.

SHARE OF TOTAL STATE EMPLOYMENT BY FARM AND FARM-RELATED INDUSTRY, 1990

State	Total farm & farm-related industries		Farm prod-uction	Agr'l Services	Agr'l inputs	Agr'l processing & marketing	Wholesale & retail trade	Indirect agri-business

FARM NUMBERS HIGHLIGHTS

The number of farms in Kentucky in 1994 is estimated at 89,000. This is the lowest number on record and represents a 2 percent decrease from the 1993 estimate of 91,000 farms. Kentucky continues to rank fourth nationally in number of farms. The only states with more farms than Kentucky are Texas (185,000), Missouri (104,000) and Iowa (100,000).

Of the 89,000 Kentucky farms, 51,000 farms had sales of $1,000-$9,999 and 38,000 farms had sales of $10,000 or more. Small farms, $1,000 to $9,999 in sales, are down 2,000 from 1993 while large farms, $10,000 plus in sales, held steady with the previous year. A farm is defined as any establishment from which $1,000 or more of agricultural products were sold or normally would be sold during the year. Government payments are included in sales. Land in farms held constant at 14.1 million acres and continues to account for 56 percent of the approximate 25.4 million total acres across Kentucky. The average farm size for 1994 is 158 acres, up 2 percent from the 1993 average of 155 acres.

The number of farms in the United States in 1994 is estimated at 2.04 million, down 1 percent from 1993. Total land in farms is 975 million acres, down 2.9 million acres from last year. The rate of decline in number of farms followed the historical trend while the land in farms declined marginally. The average farm size increased from 473 acres in 1993 to 478 in 1994.

The number of U.S. farms in the economic sales class between $1,000 and $9,999 decreased from 992,600 in 1993 to 967,810 in 1994. Those with sales in the $10,000-$99,999 group decreased from 732,830 to 729,900. The $100,000 and over sales group increased from 339,500 to 342,700 farms.

1/Data for farms and land in farms are from "Farm Numbers", U.S. Department of Agriculture, National Agricultural Statistics Service. Farm real estate values and farm taxes are from "Agricultural Resources, Agricultural Land Values and Markets", U. S. Department of Agriculture, Economic Research Service. 2/Not available.

FARM EXPORTS

Agricultural exports from Kentucky during fiscal year 1993 were valued at $804.6 million. Most commodities increased from 1992, but significant decline in the top two commodities resulted in an 8 percent decline in the total. Unmanufactured tobacco continued as the number one commodity with an export value of $314.1 million, but tobacco exports were down 14 percent. Live animals, including horses, totaled $161.5 million, down sharply from the $240.6 million exported in 1992.

Value of U.S. agricultural exports totaled $42.6 billion in FY 1993, up slightly from a year earlier. Japan continued to be the top market importing $8.4 billion in U.S. agricultural products. Feed grains and products were the highest valued commodity with $6.5 billion in exports, followed by soybeans and products with $6.1 billion dollars exported. Wheat and products exports were valued at slightly over 5 billion dollars.

California was the leading State in agricultural exports with a total value of $5.2 billion. Vegetables, fruits, and nuts were the leading commodities from California. Iowa farm exports had a value of $2.98 billion. Illinois, Nebraska, Texas, and Kansas all exported over two billion dollars worth of agricultural products.

The FY 1994 forecast for U.S. agricultural exports is $42.5 billion, about the same as FY 1993.

1/This information presents survey results for on-farm fertilizer and agricultural chemical use for the 1993 crop year. Chemical use data were collected on a random sample of corn and soybean fields beginning in late July 1993. The data collection was funded through the President's Water Quality Initiative and began the process of developing a data series on chemical use. 2/1,370,000 planted acres in Kentucky; 65,690,000 planted acres for the 16 major states. 3/Refers to acres receiving one or more applications of a specific agricultural chemical.

Farms...number..	92,453	90,281
Land in farms...acres..	14,012,700	13,665,798
Average size of farm...acres..	152	151
Value of land and buildings: 2/		
Average per farm...dollars..	135,696	163,660
Average per acre...dollars..	896	1,077
Estimated market value of all machinery and equipment: 2/		
Average per farm...dollars..	22,670	24,918
Farms by size:		
1 to 9 acres...	10,648	10,402
10 to 49 acres...	20,707	21,911
50 to 179 acres...	38,261	36,515
180 to 499 acres...	17,920	16,586
500 to 999 acres...	3,618	3,468
1,000 acres or more...	1,299	1,399
Total cropland...farms..	88,664	86,345
acres..	8,900,086	8,880,989
Harvested cropland...farms..	83,097	79,590
acres..	4,250,284	4,417,651
Irrigated land...farms..	3,733	2,120
acres..	37,693	27,647
Market value of agricultural products sold...$1,000..	2,075,571	2,663,702
Average per farm...dollars..	22,450	29,505
Crops, including nursery and greenhouse crops...$1,000..	889,882	1,449,823
Livestock, poultry, and their products...$1,000..	1,185,689	1,213,879
Farms by value of sales:		
Less than $2,500...	24,380	17,881
$2,500 to $4,999...	16,421	14,745
$5,000 to $9,999...	17,620	17,129
$10,000 to $24,999...	18,078	20,354
$25,000 to $49,999...	7,880	9,623
$50,000 to $99,999...	4,527	5,519
$100,000 or more...	3,547	5,030
Total farm production expenses 2/..$1,000..	1,485,994	1,828,743
Average per farm...dollars..	16,073	20,256
Operators by principal occupation:		
Farming...	41,451	40,175
Other...	51,002	50,106
Operators by days worked off farm:		
Any...	54,464	51,075
200 days or more...	37,893	36,497

1/Data are preliminary and make no allowance for incompleteness. 2/Data are based on a sample of farms.

COUNTY DATA

The following section highlights each county in Kentucky. Crops produced, livestock inventories, milk production, and agricultural cash receipts are displayed with the appropriate rank among all counties. Data published here are available elsewhere in this bulletin, but this should aid data users interested in certain counties. Also, included for each county are 1982, 1987, and 1992 agricultural census data for number of farms, land in farms and harvested cropland acres.

Below is a table with data for the entire State. On succeeding pages each county is listed alphabetically. If you have any questions on this section, please get in touch with us.

STATISTICAL REPORTS PROGRAM

In addition to this Annual Bulletin the Kentucky Agricultural Statistics Service publishes timely estimates on crop and livestock production, prices and various other special reports. A list of the more important reports and the approximate date of release is shown in the table below. Many of these reports are combined and republished in the twice-monthly Kentucky AGRI-NEWS.

Due to budget restraints, there is a minimal charge for the AGRI-NEWS and Crop-Weather for non-reporters. Current reporters may receive these reports without charge. These reports may be obtained from the Kentucky Agricultural Statistics Service, P. O. Box 1120, Louisville, Kentucky 40201-1120. PHONE: (502) 582-5293.

TYPE OF REPORT	FREQUENCY OF REPORT	APPROXIMATE DATE AVAILABLE
I. CROP REPORTS		
1. Intentions to Plant	Annually	March 31
2. Production	Monthly	9th - 12th
3. Grain Stocks	Quarterly	Jan 12; Mar 31; Jun 30; Sep 29
4. Annual Crop Summary	Annually	January 12
5. Crop Values	Annually	January 25
6. Winter Wheat Seedings	Annually	January 12
II. LIVESTOCK REPORTS		
1. Cattle Inventory & Calf Crop	Semi-Annually	Feb 4 - U.S. & KY, Jul 22 - U.S. Only
2. Hog Inventory & Pig Crop	Quarterly	Mar 25, June 30, Sep 29 - Top 16 States & U.S.; Dec 29 - U.S. & KY
3. Sheep Inventory & Lamb Crop	Annually	January 28
4. Livestock Slaughter	Monthly	20th - 25th
5. Meat Animals - Farm Production, Disposition & Income	Annually	April 14
III. DAIRY REPORTS		
1. Cows Milked & Milk Production	Monthly	13th - 16th
2. Milk Production & Disposition	Annually	May 13
IV. POULTRY REPORT		
1. Poultry Inventory, Dec. 1	Annually	January 27
2. Eggs, Chickens & Hatchery	Monthly	23rd - U.S. Only
V. PRICE REPORTS		
1. Prices Received by Farmers	Monthly	28th - 31st
2. Prices Paid by Farmers	Quarterly	28th - 31st Jan, Apr, Jul, Oct
VI. MISCELLANEOUS REPORTS		
1. Farm Numbers & Land in Farms	Annually	July 28
2. Farm Real Estate	Periodically	-
3. Farm Labor & Wage Rates	Quarterly	15th - 17th Feb, May, Aug, Nov U.S. & Regional
VII. CROP - WEATHER (April - November)	Weekly	Mondays, 3:00 P.M.
VIII. COUNTY ESTIMATES		
1. Major Commodities & Cash Receipts	Annually	February - May
2. KASS Info (3 1\2 in. Diskette with Multiple Year Data)	Annually	August

REPORTS AVAILABLE FROM KENTUCKY AGRICULTURAL STATISTICS SERVICE

(ORDER FORM)

The Kentucky Agri-News and Crop-Weather Reports are available on a subscription basis. To subscribe, check the desired reports below, send this page and a check or money order payable to USDA-NASS to →

TO SUBSCRIBE MAIL TO:

Agricultural Statistics
Board Publications
Room 5829 - South Bldg.
U.S. Dept. of Agriculture
Washington, D.C. 20250-2000

		FEE	
902	☐	$10.00	**KENTUCKY AGRI-NEWS** - This twice-monthly four-page report is a summary of statistical reports on crop acreage and production, inventory numbers, egg and milk production and monthly price information, etc.
930	☐	$12.00	**CROP-WEATHER REPORTS** - Weekly summary published April through November providing Kentucky's crop progress and condition, weather data, soil moisture and other timely information.
953	☐	$8.00	**KASSINFO 3 1/2 in. DISKETTE** - Kentucky County data for 5 years can be viewed by commodity or by county.

All reports are free to those who provide data used for summarization. If you are a Kentucky agricultural producer, who participates in our Survey Program, check the desired reports and mail to the complimentary copy address below.

In addition, this office publishes this "Kentucky Agricultural Statistics" and county estimate for crops and livestock annually. To receive a complimentary copy, check the desired reports and return a copy of this page to the address at the right.

FOR COMPLIMENTARY COPY MAIL TO:

Featured below are the student winners of the 1994 "Writing for Agriculture" contest for grades 1-8 sponsored by the Kentucky Department of Agriculture.

The farmer helps the environment by making sure that the soil is taken care of. He takes care of topsoil by making sure that it gets lots of water and organic fertilizer. He rotates his crops to keep from wearing out his soil.

John Burke, III
1st Grade
Ludlow Elementary, Ludlow

When a farmer takes good care of his land, he also takes care of the environment. For example, no-till crops help keep the soil from eroding. Farmers pick the right chemicals to help their crops and not hurt nature. Farmers know tomorrow's children will need the land too.

Kristopher Kelley
2nd Grade
Carlisle County Elementary, Bardwell

Organic farming is a way of working in harmony with the environment. By using fewer pesticides and better natural land management, we can learn conservation methods that will help us while helping the earth. If we work together we can make a difference.

Stephanie Arnold
3rd Grade
Bardstown Elementary, Bardstown

The farmer and the environment are best friends. Farmers strip farm to prevent erosion, because they appreciate their land. Farmers also rotate crops every two years to keep from wearing out the land. Other farmers are using the method No-Till which prevents erosion and leaves nutritients in the soil. They also plant trees to prevent soil slippage. To prevent dangerous chemical build up in the ground, farmers use natural fertilizer. To save the environment, a few farmers are practicing organic farming, using fewer chemicals, pesticides and insecticides. Not only farmers should work in harmony with the environment . . . . Everyone should.

Mindy McElfresh
4th Grade
Jones Elementary, Maysville

Farmers were the first environmentalists. Farmers must keep agriculture in harmony with the environment because they live on the land that provides, and will provide, their food and water. One way farmers keep in harmony is by no-till planting their crops, which builds the soil's organic matter, increases earthworm numbers and reduces erosion. Another way is being sure they use only the needed and recommended chemicals and fertilizers. By making decisions that are good for agriculture and the environment, farmers are insuring that the land they love will continue to produce for future generations.

Katie Kelley
5th Grade
Carlisle County Elementary, Bardwell

Are we ever going to think about farmers?
Going to a farm might help us understand.
Reading that if we don't help the environment we may starve.
I think we could clean this place up.
Could we make a change?
Using good judgment we can.
Loving our earth instead of hurting it.
True, it will take a while.
Usually we say we get our food from a store —
Really wrong!
Environment and agriculture need to work together forever!

Laura Pryor
6th Grade
Nebo Junior High School, Nebo

Imagine a beautiful farm landscape with rolling hills and corn as high as an elephant's eye. Land that beams with vegetation, life and love. Now imagine the same farm with rocky fields, little vegetation: neglected. If agriculture doesn't work with the environment, this could be farms across America.

To prevent this farmers use strip farming and crop rotation.

Agriculture depends on the environment. The condition of land is what makes crops grow. By using techniques that help the environment, we can harmonize man with nature and keep the land growing and blossoming for all time.

Beth Thurman
7th Grade
Livermore School

Farming and the environmental movement have had many conflicts through the years. The overuse of pesticides and other discredited farming practices have caused many of these clashes. Now farmers are taking the leading role in bringing these previously conflicting philosophies into harmony.

Some methods are traditional, such as using organic fertilizers, composting, contour plowing, crop rotation, returning crop residue to the fields and planting cover crops. More modern methods include genetic engineering of pest and drought resistant plants, introducing natural predators of harmful insects into the farm, and the use of environmentally friendly pesticides.
